Designing the Remove Before Flight tags

The Remove Before Flight key tags are made using one of three production methods: *woven, embroidered,* or *printed*. The merrow border is the last step in the manufacturing process. The width of the Merrow border is 3/32" or 0.12" for embroidered patches and 0.10" for the woven and printed patches.

The keyring position is always the same by default, and you should consider that when designing the Remove Before Flight keychain.

The most common typeface for the "RBF" text is Bebas Neue (Bold).
